QUESTIONS

1. What data do we want to use?
2. What arrangements work best for data?
3. How can we enhance readability in our design?
4. How effectively does the combined chart communicate the intended insights?
5. What additional features, such as interactivity or hover effects, could improve user engagement?
6. What data labeling will help?

LAYOUT

Water Use and Stress

Pig Meat

FOCUS

Monitoring annual freshwater withdrawals is crucial for accessing overall water consumption trends and sustainability

Analysing freshwater use by region can reveal geographical disparities in water consumption patterns and resources

Assessing the availability of renewable freshwater resources is fundamental to understanding sustainability

Water stress rankings provide a clear indicator of how much pressure a country's water resources are under

One of the largest consumers of freshwater globally. Highlight the efficiency of water use in different economic contexts!

Title: Water Use and Stress
Author: Ong Chong How
Date: 02/10/2024
Sheet: 2
Task: Design Visualization of topic Water

OPERATIONS

DISCUSSION

- + Easy Scanning (presenting multiple pieces of information)
- + Compact arrangement and vertical flow can guide viewer's eye
- + Visual Hierarchy to emphasize on each element and logical progression
- + Design Flexibility (easily integrated with other design elements like radial bar chart)
- + Vertical format allows for creative designs, like using different colors or icons for each idiom.
- If the vertical layout requires a lot of space, it could lead to excessive scrolling.
- Potential Aesthetic Imbalance (Loss of flow)

LAYOUT

Water Use and Stress

Global freshwater withdrawals have increased dramatically over the past century, rising approximately six-fold since 1990, with a sharp rise from the 1980s onwards.

Global Annual Freshwater Withdrawals

Agricultural Water vs. GDP per Capita by Continent

Renewable Water Resources

Sheet: 3
Task: Design visualization for water topic

OPERATION

1975 — 0 — 2024
← →

Enabling users to easily identify change in freshwater usage over the years.

Allowing users to see the magnitude of renewable water resources.

Select Continent All Click!!

DISCUSSION

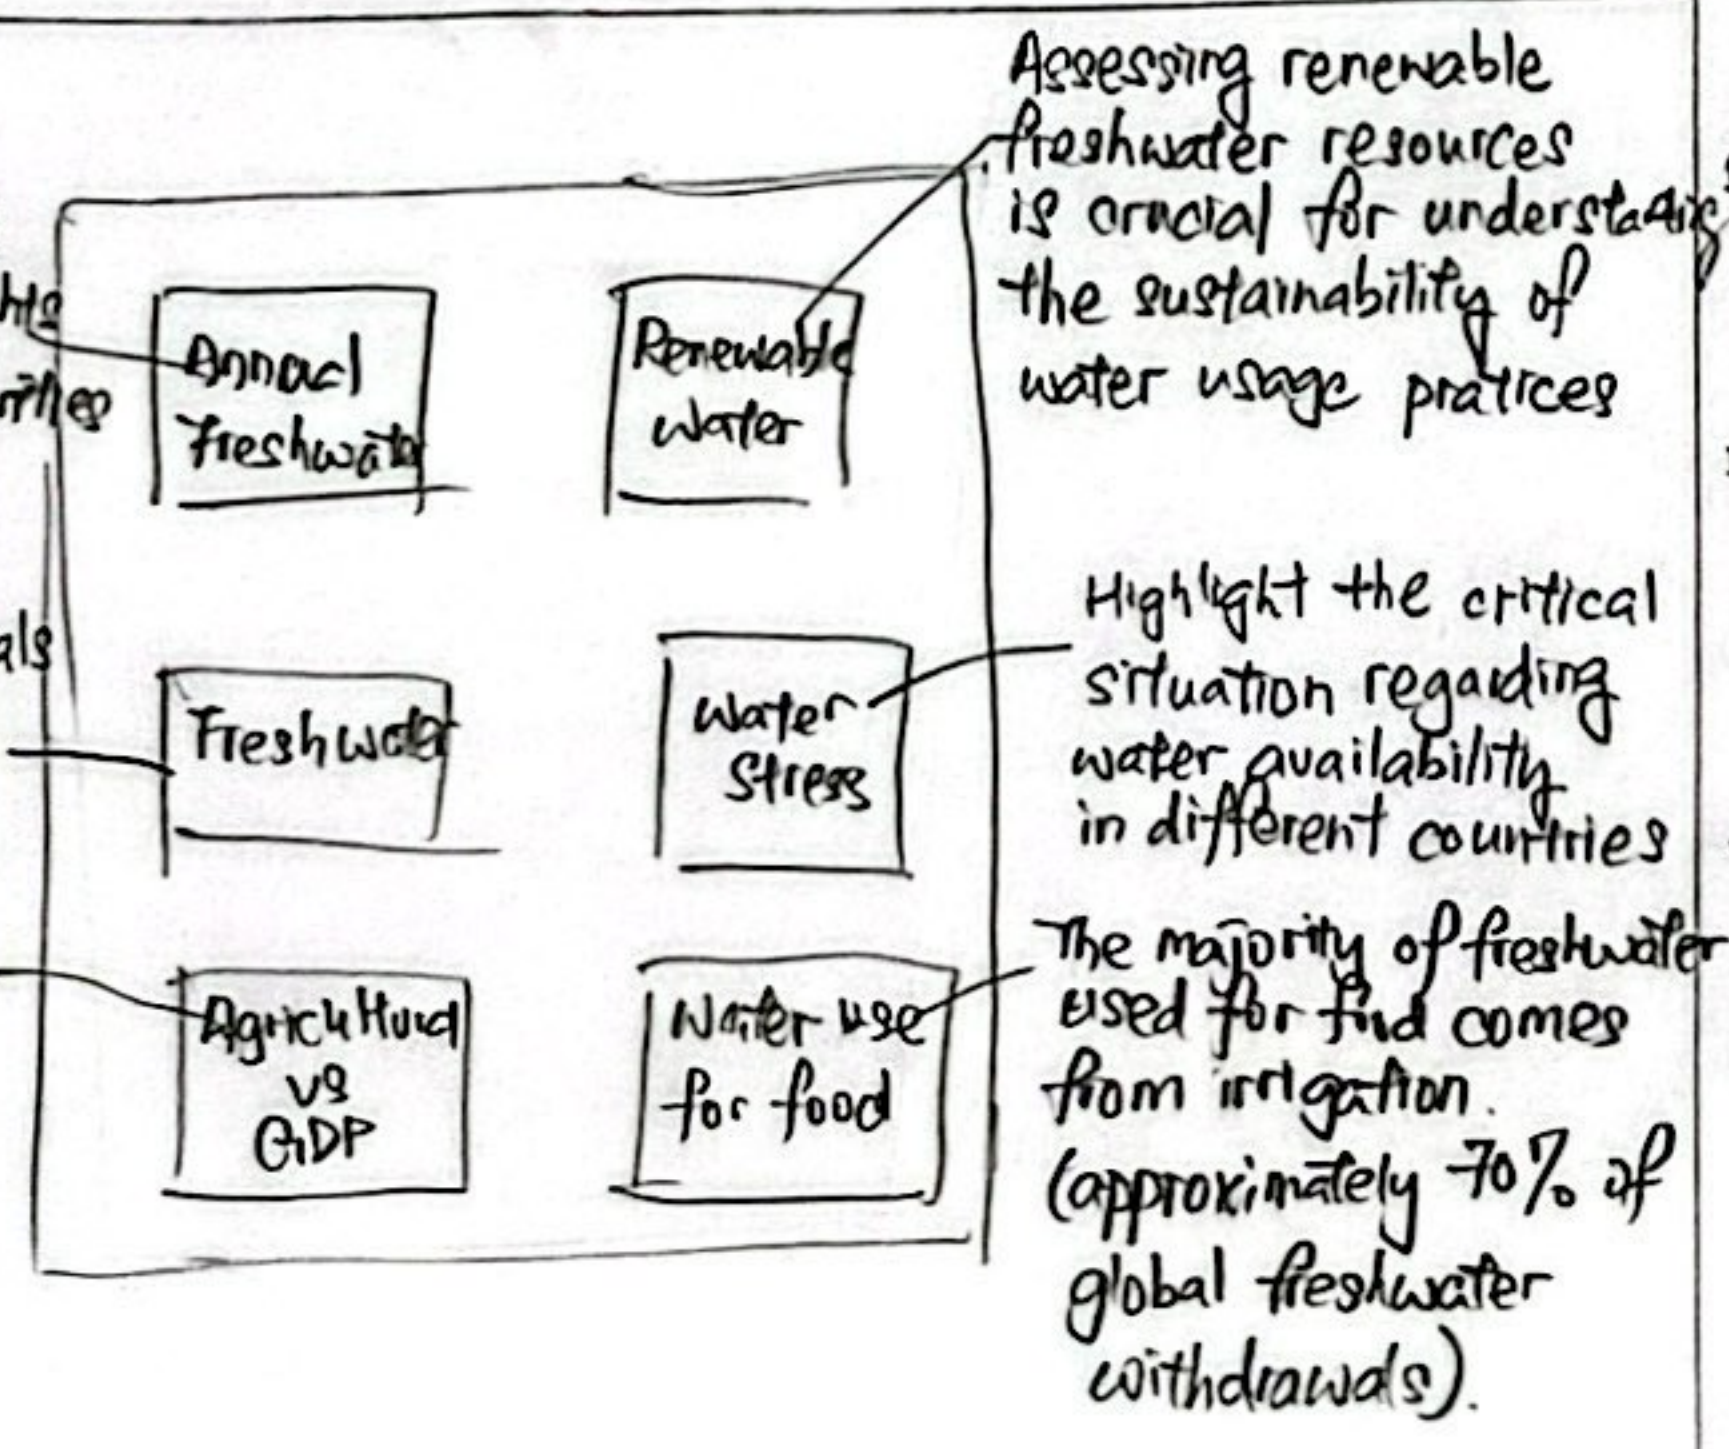

- + Create a balanced and symmetrical appearance, making the design aesthetically pleasing.
- + The layout facilitates direct comparisons between related idioms or concepts.
- Too much content !!! Risk of clutter especially for map!
- Loss of Emphasis and uneven distribution
- Overlapping Concept and complexity in interpretation
- Different audiences may interpret the arrangement differently, potentially leading to miscommunication of key messages.

Focus

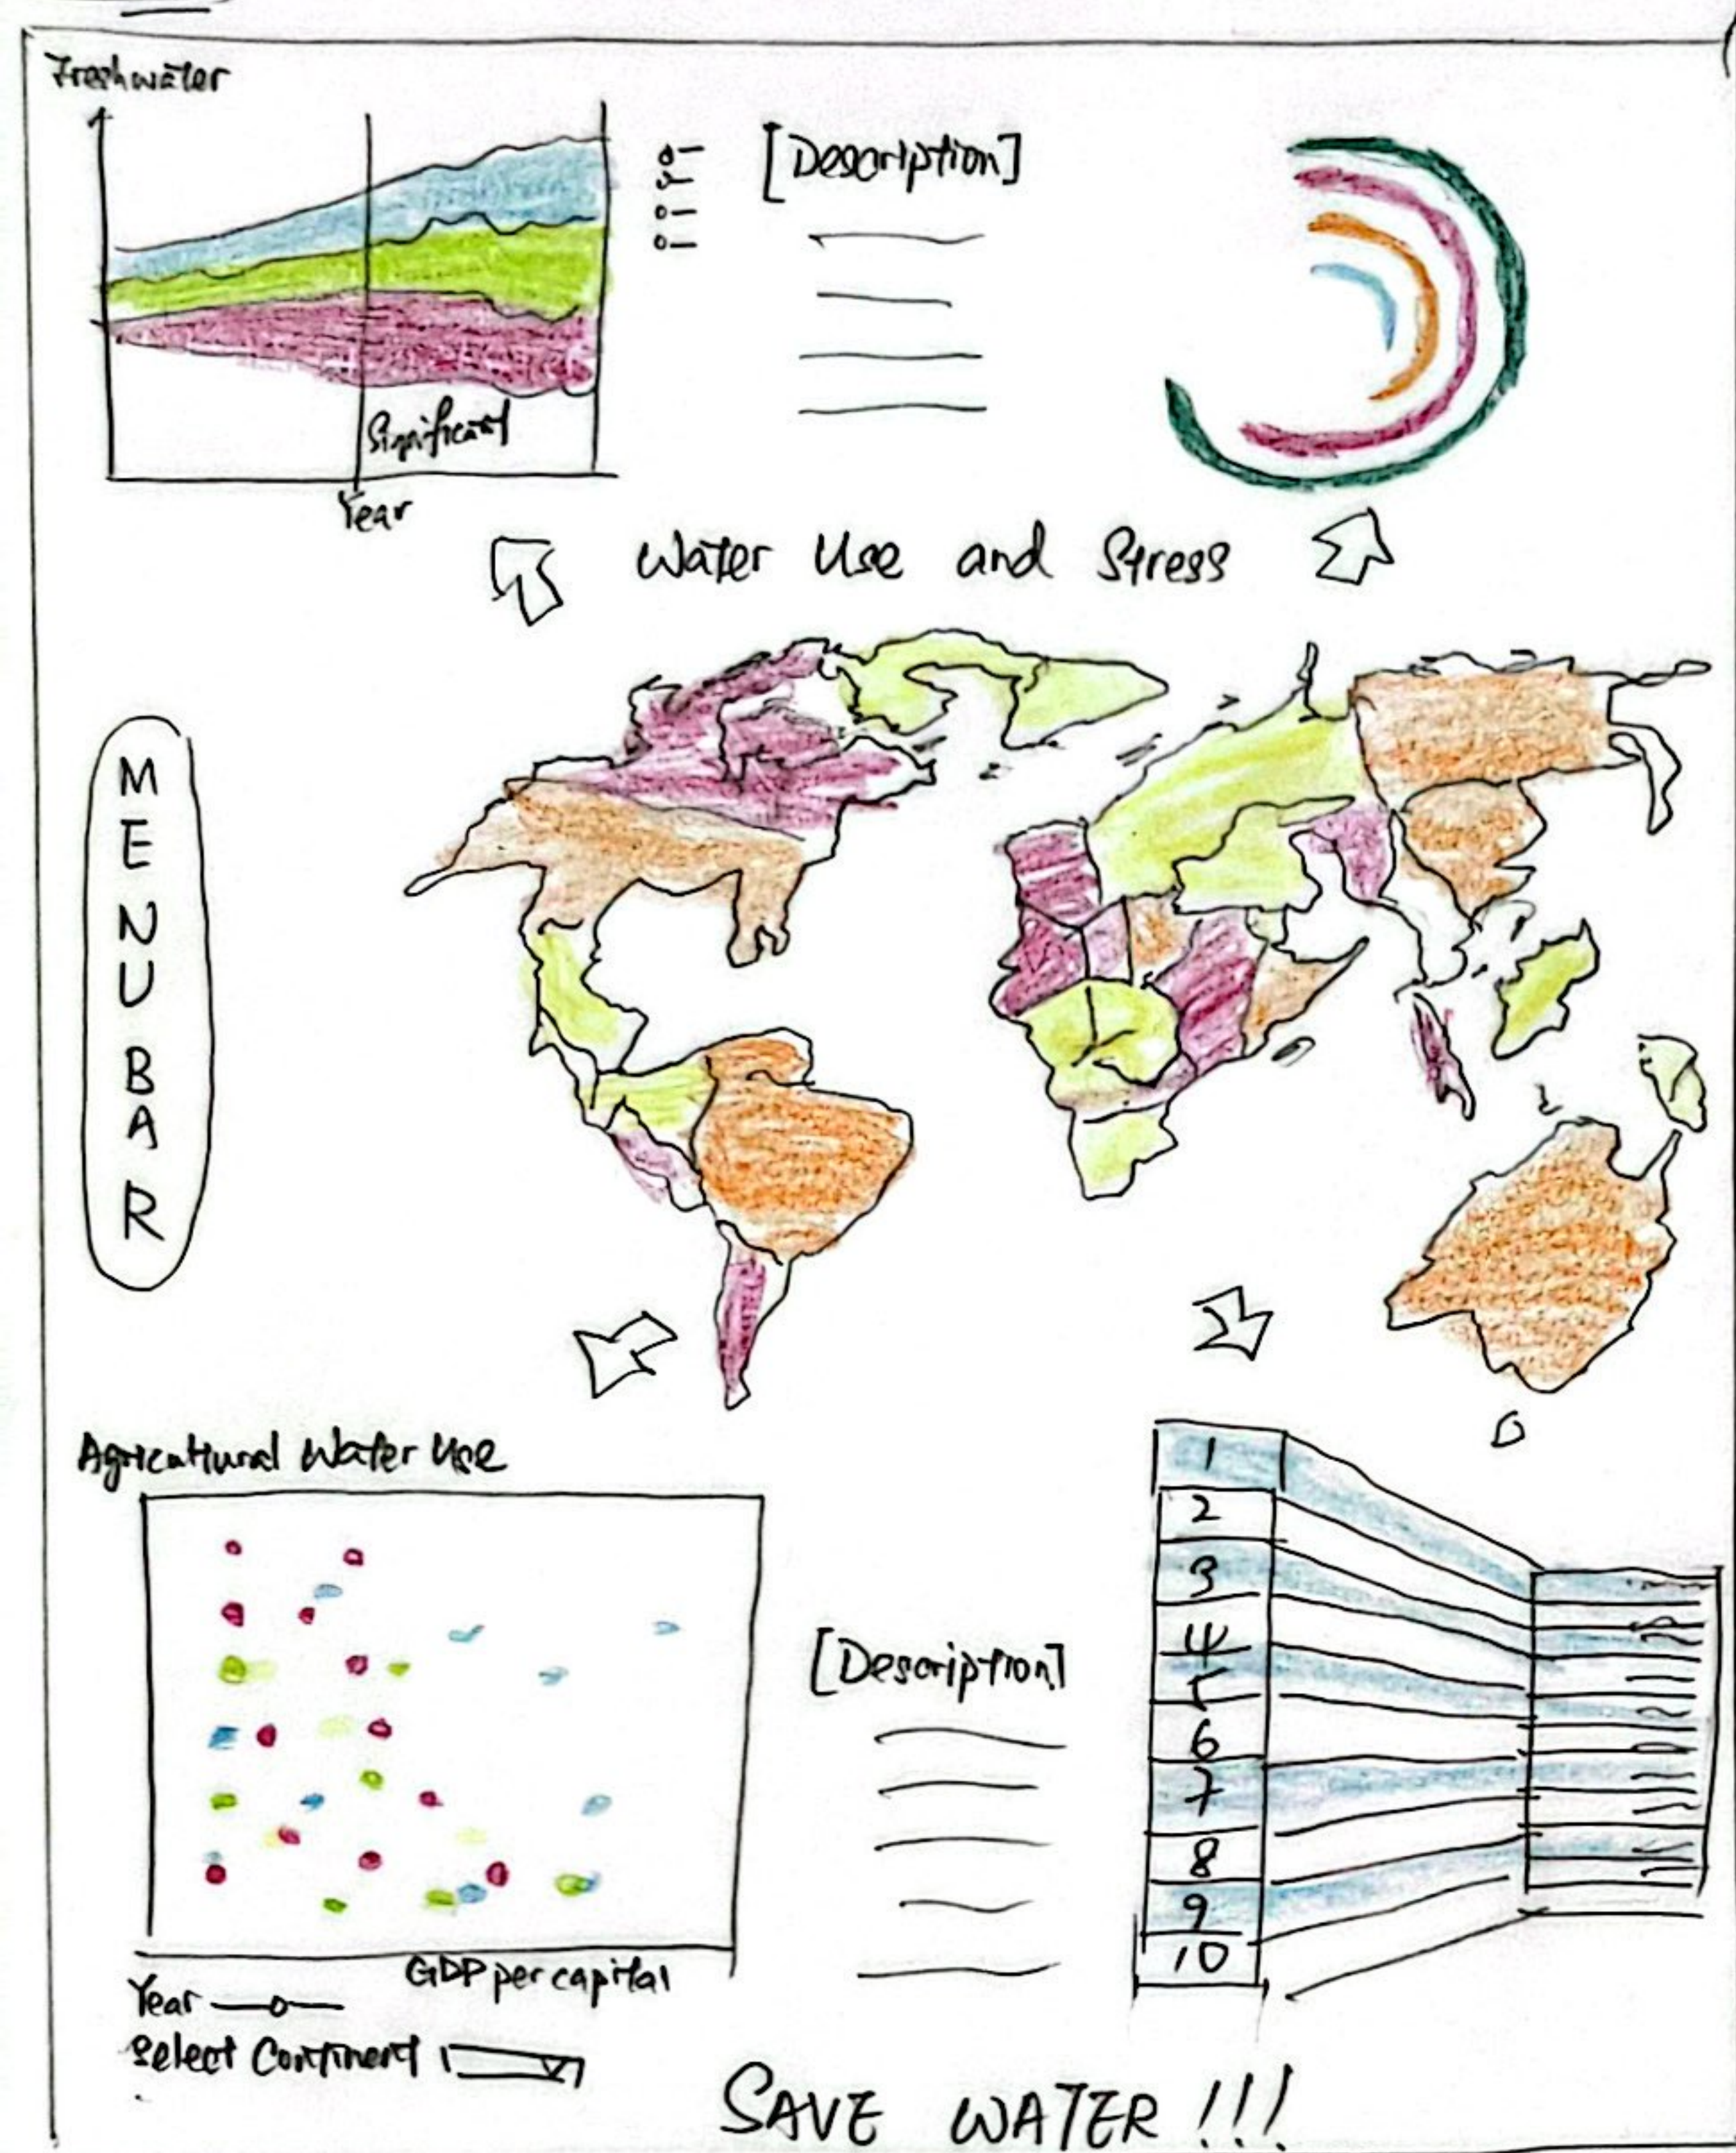

Analysing freshwater use by region provide insights into geographical disparities in water consumption.

Provides an overview of total freshwater withdrawals and helps to identify trends over time.

The balance between water usage for agriculture and the economic output of a country

LAYOUT

Title: Water Use and Stress
 Author: Ong Chong How
 Date: 08/10/2024
 Sheet: 4
 Task: Design Partitioned Poster about Water

OPERATION

1. Clickable Infographics.
 - User can click on to reveal additional info
2. Hover effects
 - Use to display supplementary information or fun facts
3. Animation
 - Will use timer to add automated animation

→ ↘ ↗ → over time!

DISCUSSION

- + Interactive elements encourage viewers to actively engage with the content
- + Viewers can provide instant feedback, which can be valuable for gauging public opinion on water use and food.
- Partitioned byouts lead to a disjointed narrative.
- Loss of flow
- Limited Space (Content constraints, potential for clutter)
- Cognitive Overload !!!
- Difficult navigation
- Aesthetic Concerns.
- Rigidity in Structure

FOCUS

1. Intro to Water Use for Food
 - Discuss how water is vital resource for agriculture, food production, and food security
2. Agricultural water withdrawals
 - Explain different types of irrigation and their efficiency.
3. Livestock and Water Use
 - Explain that livestock requires significant water, not just for drinking but also for producing animal feed.
4. Freshwater Resources and sustainability
 - Discuss the distinction and the implications for water management.
5. Policy and technological innovations.
 - Discuss the importance of adopting efficient irrigation practices and crops selection to reduce water use.
6. Call to action.
 - Summarize the key message and encourage proactive steps.

Title: Final Design Sheet

Author: Ong Chong How

Date: 08/10/2024

Sheet: 5

Task: Final Visualization
Dashboard Design

OPERATION

1. Clear Section Titles and Headings
 - Use bold and font size.
 2. Use of Visual Hierarchy
 - Differentiate heading, subheading and body text
 3. Integrated Graphics and Images:
 - Use relevant graphics, charts and images to complement in text.
- Interaction:
- Hover effect
 - QR code if possible
 - Interactive Polls
 - Feedback section
 - Interactive Map
 - Gamification Elements

DETAIL

Front-End tech

- HTML
 - Structure the content
 - Organize different sections
- CSS
 - Style the poster for appealing design
- JavaScript
 - Add interactivity to the poster

Back-End tech

- Node.js
 - AJS runtime for building server-side applications.
- Libraries
 - Vega-Lite
 - D3.js
 - Chart.js
